All dates subject to the sighting of the moon.
Information based on data from the H.M.
Nautical Almanac Office and the Royal
Greenwich Observatory.

Al-Qamar fi Burj al-Aqra b -
According to narrations, we should
refrain from reciting Nikāh when the
moon passes through the region of
Scorpio.

Regional Variations -
The Islamic dates are based on
expectation of crescent sighting in
Europe calculated from the latest
available scientific data. During
1448/49 A.H. regional variations
may occur for some months. To
fulfil the Sharī'a requirements we
will continue to ascertain that the
actual sighting has occurred on the
days expected.

Visible Crescent -
One should not confuse the New
Moon with the visible thin crescent.
It should be realised that the new
crescent following a lunar month of
30 days will be brighter and stay
longer in the sky than the crescent
following a month of 29 days.

New Moon -
The New Moon phase is defined to
be the moment when the moon is
almost directly between the Earth
and the Sun. At this moment the
moon's dark surface faces the
Earth. The New Moon is completely
invisible. The date and time of this
invisible New Moon is commonly
found in almanacs, newspapers
and calendars.

First Crescent -
The Islamic month begins with the
visible First Crescent and not with
the invisible New Moon. The First
Crescent is usually sighted in the
western sky just after sunset on the
first or second evening after the
New Moon phase. The sighting
depends upon the altitude of the
crescent above the horizon, time
difference between sunset and
moonset and the angular distance
between the sun and the moon.

PLEASE NOTE:
4th Rabi' al-Awwal: Mu'mineen
should note of the 3 reported wafat
dates, 2 other dates are 10th
(popular) or 12th Rabi' al-Akhir
(less popular).

10th Rabi' al-Akhir: Mu'mineen
should note of the 4 reported
wiladat dates, 2 popular ones are
8th or 10th Rabi' al-Akhir.

They are advised to consult with
local centers as to what works
better for them to avoid overlap with
wafat date.
